Tasya, below and attached is some info about the excavations at 8801. I didn't get an answer about the deliverables timeline though. One step at a time I suppose. Area 3 is the one immediately across the property boundary, and Area 4 is the one with dioxin/furans. Here is a screen shot from the Dec 2020 Addendum to the Feasibility Study and Interim Action Work Plan showing the locations:

Thank you for look at the interim action work plans. I was going to suggest looking at those. But I could never get around to sending them to you. My swamp has too many alligators. Attached is the latest excavation schedule.

Hello Erin:

I write to give you notice that the hotspot excavation work at the 8801 property will commence next week on September 13, 2021. The current contractor's schedule for the remediation related work is attached. There may need to be some changes to the schedule as work progresses. For example, we may not be able to get access to Area 8 for some months since this area is pending the demolition of the small warehouse and the demolition work won't proceed until the permit for shoreline related construction work is approved.

I understand that you and Rick Thomas plan to visit the 8801 property next week to observe the excavation work. Would you be kind enough to let me know the day and time of your proposed visit as I would like to be on site at that time?

With regards, Meg
